

IS222 – Assignment 2 Marking Rubric

Criteria	Excellent	Good	Fair	Poor	Zero
1. Entities & Attributes	All relevant entities and attributes identified correctly from scenario	Most entities captured; minor omissions	Several missing/incorrect	Few correct entities	No valid entities
	10	8	6	3	0
2. Relationships, PK/FK, & Cardinality	All relationships and participation constraints are accurately represented	Most relationships correct; minor issues	Multiple relationship errors	Few relationships correctly shown	Not attempted
	10	8	6	3	0
3. ERD Presentation & Notation	Neatly presented, correct notation used throughout	Mostly clear with slight layout/notation issues	Several inconsistencies	Poorly drawn diagram	No ERD
	6	5	4	3	0
4. Table Creation (DDL Accuracy)	Tables created exactly as per ERD with all attributes and types	Minor syntax or structure issues	Multiple issues in table structure	Many errors	Script not functional
	10	8	6	3	0
5. Integrity Constraints (PK, FK, NOT NULL, etc.)	All constraints implemented correctly	Minor issues in constraint application	Several constraints missing	Most constraints incorrect	Not implemented
	10	8	6	3	0
6. Insert Data – Validity & Relevance	All 10 records per table are inserted; data is highly realistic, diverse, and aligned with the scenario (e.g., correct	Data is mostly realistic and meets the scenario needs; a few values are simplistic or reused, but still valid. No	Data covers the required number of records, but contains repetitive or borderline unrealistic values. Some constraint-	Fewer than 10 records per table; values seem arbitrary or unrelated to the scenario.	Data is missing or not inserted at all. OR Insert statements fail completely due

	dates, fees, qualifications). No constraint violations. Demonstrates thoughtful planning.	major constraint issues.	related errors may be present (e.g., FK mismatches).	Multiple constraint violations or poor consistency between tables.	to syntax or logic errors.
	10	8	6	3	0
7. Script Execution (SQL files)	Script runs flawlessly in MySQL shell	Minor syntax/execution errors	Several execution issues	Mostly fails to execute	Not executable
	10	8	6	3	0
8. Naming Consistency & Commenting	Consistent use of names matching ERD	Slight naming mismatch	Several inconsistencies	Poor or random naming	Not followed
	6	5	4	3	0
9. Query Logic & Correctness (Q1–Q7)	All 7 queries are correct, logical, meet scenario requirements, and return accurate output	1–2 queries with minor logic issues; outputs mostly correct	3–4 queries incorrect or missing joins/conditions	Most queries incorrect or overly simplistic	No correct query logic submitted
	10	8	6	3	0
10. Use of SQL Clauses (JOIN, GROUP BY, ORDER BY, etc.)	Excellent use of SQL clauses that demonstrate understanding of multi-table relationships and aggregation	Moderate use of clauses; mostly appropriate with small errors	Basic clauses used; may miss important conditions or joins	Incorrect or irrelevant clause usage	Clauses missing or incorrect syntax used
	8	6	4	2	0
11. Syntax & Execution (No Errors)	All queries execute without syntax errors and return valid results	Minor syntax errors in 1–2 queries, still produces output	Moderate syntax issues; partial execution	Many queries fail to execute due to syntax	Queries do not execute at all
	6	5	4	3	0

12. Commenting & Query Labelling	All queries clearly labeled (e.g., -- Query 1 etc.) with meaningful inline comments	Most queries labeled and readable	Some queries lack comments or labeling	Labels are vague or mostly missing	No labels or comments provided
	4	3	2	1	0
